

CSCE Environmental Division

Dear Members,

I would like to introduce myself and the activities of the CSCE Environmental Division. I have been the chair since June 2015. The Division aims to provide technical and organizational support to workshops, conferences. The areas of interest include air pollution, land management, radiation protection, water quality, solid waste management, hazardous waste management, toxic material control, wastewater management, environmental hydraulics and public health. New developments are that the Environmental Engineering Specialty conference will now be held every year instead of every two years to highlight the importance of this area at each conference. I will be the technical chair for the upcoming Environmental Specialty conference in Vancouver in 2017 and therefore look forward to your strong participation at this conference. The Division also collaborates with the Sustainable Development Committee and in international activities particularly in China.

At the Vancouver conference, we will hold an environmental division meeting and hope you will attend. This will be your opportunity to be involved in the planning of future activities. In the meantime, if you have ideas for events (seminars, short courses, lecture tours, workshops, etc), production of technical documents and want to become involved in the executive committee, please let me know. We would like to know how we can better serve our environmental members.

Thanks for your attention and future participation.

Catherine Mulligan
Chair, Environmental Division
